

Introduction to Habitat Condition Assessment

Adult

Employer Training

Habitat condition assessment is a key skill for understanding the health, function, and resilience of natural environments. This course introduces the principles, methods, and practical applications used to evaluate habitat quality across landscapes. You will explore how ecological indicators, field surveys, and data analysis combine to reveal the pressures acting on ecosystems and the opportunities for their restoration.

Through real-world examples and hands-on activities, you'll learn how assessments support conservation planning, environmental management, and policy decisions. By the end of the course, you will be equipped with foundational knowledge to interpret habitat condition and contribute to informed ecological stewardship
